TITAN FLOW MATRIX™ Indicator

TITAN FLOW MATRIX is a concept indicator, also known as an institutional quantitative finance as a **Multi-Factor Confluence Model**.

The idea is Instead of looking at isolated signals, you mathematically aggregate them into a single "Truth Score." When 10 different indicators across 5 different categories (**Trend, Momentum, Volume, Money Flow, Volatility**) all align perfectly, the probability of a successful trade skyrockets.

TITAN FLOW MATRIX will calculate a score from **0 to 100**.

- **> 75:** Extreme Bullish Confluence (Everything is firing Up)
- **> 55:** Bullish Bias
- **45 - 55:** Chop / Neutral
- **< 45:** Bearish Bias
- **< 25:** Extreme Bearish Confluence (Everything is firing Down)

The Visual Layout

- **The White Line:** This is the master "Confluence Score" oscillating between 0 and 100.
- **The Green Zone (> 50):** The bulls are in control. The brighter and higher the green, the more aggressive the buying pressure.
- **The Red Zone (< 50):** The bears are in control. (Notice that brief, sharp dip into the red zone a few weeks ago? That perfectly captured a moment where momentum, trend, and volume all broke down simultaneously before recovering).
- **The Thresholds (25 & 75):** The dotted green line at the top (75) marks **Extreme Bullish Confluence**. The dotted red line at the bottom (25) marks **Extreme Bearish Confluence**.

How a Quant Trades This (Actionable Insight)

- **The Rule:** You **never, ever short** a stock with a Titan score above 75. The sheer amount of institutional momentum required to push 10 different indicators into the green simultaneously will steamroll anyone trying to catch a top.
- **The Warning:** A score in the 90s is *thermally exhausted*. It means the rubber band is stretched to its absolute maximum mathematical limit. Every buyer who wants in is already in.
- **The Execution:** If you are already holding NVDA, this tells you to aggressively trail your stop-loss upward to lock in profits, because a mean-reversion pullback is imminent. If you are not in NVDA, this tells you **do not buy here**. You wait for the Titan white line to dip back down toward the 50-60 level (a structural pullback) before entering
